Research into speech & language skills in individuals with a \textit{SETBP1} loss of function variant: an international study

Would you be willing to take part in our project?

We are running a project looking at speech & language in individuals with a \textit{SETBP1} loss of function variants.

By improving our understanding of speech & language abilities, we hope to improve prognoses, better identify individuals in need of speech therapy and to develop more targeted speech therapies.

We are looking for individuals:

- confirmed to have a \textit{SETBP1} loss of function variant by a genetic test
- aged 6 months - adulthood
- who are verbal or non-verbal
- who speak English, German, Dutch, Italian, French, Portuguese, Spanish

What is involved?

- Emailing us to express interest at: angela.morgan@mcri.edu.au
- Completing an online survey of speech & language skills, survey of health & medical history, provision of an online speech sample where individuals are able
- English-speakers will also be assessed via videoconference

Get in touch!

If you or someone you know is interested in helping with other aspects of this research (ie speech & language in other genetic conditions) we would love to hear from you, by writing to:

Email: geneticsofspeech@mcri.edu.au
